EXPERIMENT – 13
CREATE A VIRTUAL MACHINE (1 CPU, 2 GB RAM, 15 GB DISK)

AIM

To create a virtual machine in VMware Workstation using one processor, 2 GB of RAM and a virtual disk of 15 GB.

REQUIREMENTS

1. A computer running the Windows operating system.
2. VMware Workstation installed on the computer.
3. Enough free disk space on the host drive to store the virtual machine (at least 15 GB).
4. An ISO file of the guest operating system, or the option to install the operating system later.

PROCEDURE

1. Open VMware Workstation from the desktop shortcut or the Start menu.
2. On the Home screen, click Create a New Virtual Machine. The New Virtual Machine Wizard opens.
3. Select the Custom (advanced) configuration type so that the hardware can be set manually, keep the default hardware compatibility and click Next.
4. Choose the guest operating-system installation option (installer disc image file, or install the operating system later) and click Next.
5. Select the guest operating system type and version, then give the virtual machine a name and a location to store its files.
6. In the Processor Configuration screen, set the number of processors to 1 and the number of cores per processor to 1.
7. In the Memory screen, set the memory for the virtual machine to 2048 MB (2 GB) and click Next.
8. Select the network type (NAT is the default) and keep the default controller and disk type options by clicking Next.
9. In the Disk Capacity screen, choose Create a new virtual disk and set the maximum disk size to 15 GB.
10. Choose to store the disk as a single file or split it into multiple files, and click Next.
11. Review the summary of the configuration on the last screen and click Finish to create the virtual machine.

IMPLEMENTATION INPUT

The New Virtual Machine Wizard was opened in VMware Workstation. The memory configuration was set to 2048 MB.

OUTPUT

The screenshots show the New Virtual Machine Wizard of VMware Workstation and the memory setting configured to 2048 MB.

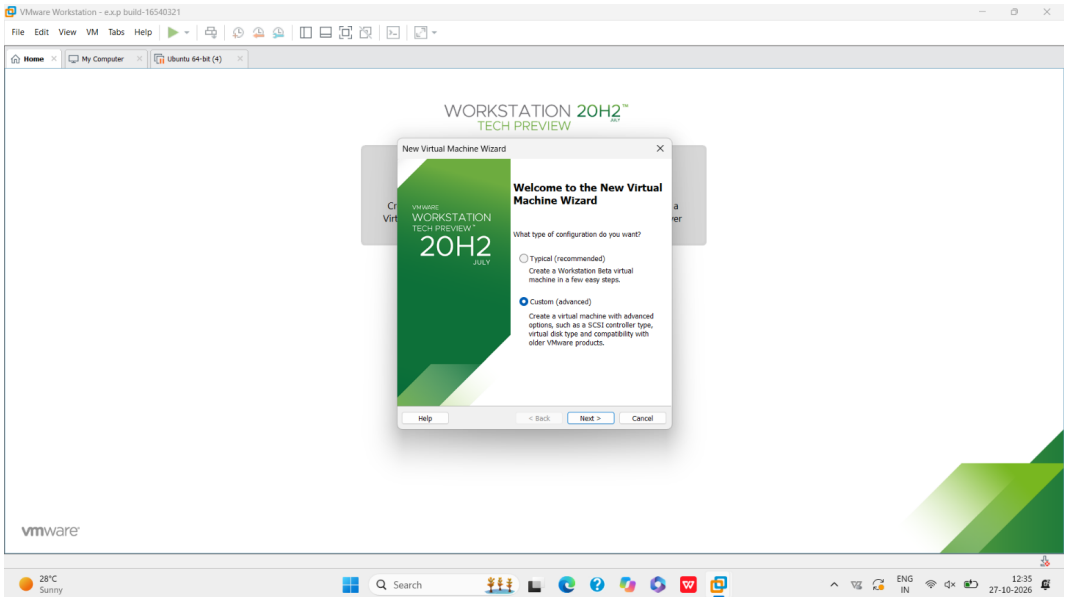

Figure 1: New Virtual Machine Wizard in VMware Workstation.

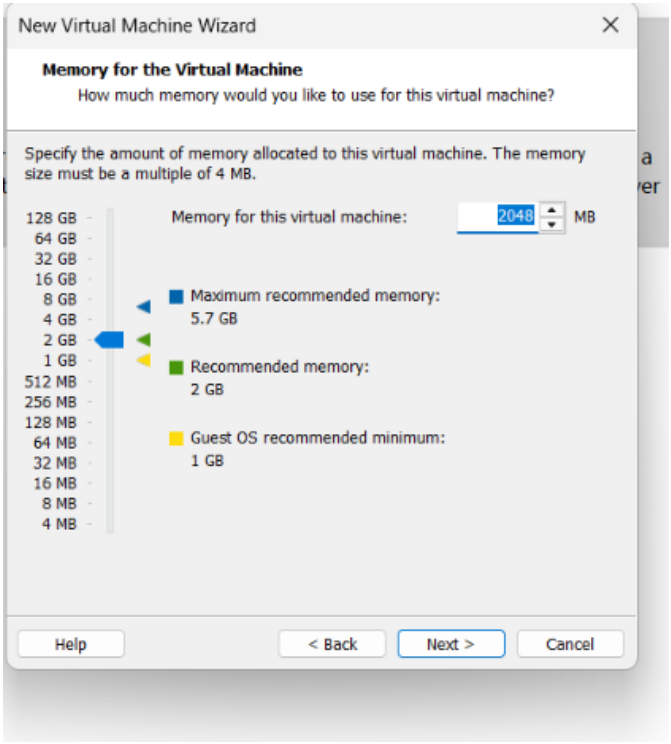

Figure 2: Memory configured to 2048 MB (2 GB).

RESULT

The New Virtual Machine Wizard was opened and the memory was set to 2 GB. The one-CPU and 15-GB disk settings still need to be confirmed in their respective wizard screens before submission.
