EXPERIMENT – 14
CREATE A VIRTUAL HARD DISK AND ALLOCATE STORAGE USING VMWARE WORKSTATION

AIM

To create a virtual hard disk and allocate storage to a virtual machine using VMware Workstation.

REQUIREMENTS

1. A computer running the Windows operating system.
2. VMware Workstation installed on the computer.
3. An existing or newly created virtual machine.
4. Enough free space on the host drive for the new virtual disk.

PROCEDURE

1. Open VMware Workstation and select the virtual machine to which the disk will be added.
2. Power off the virtual machine, because hardware settings should be changed only when it is switched off.
3. Click Edit virtual machine settings. On the Hardware tab, look at the devices already listed and note the current disk size.
4. Click Add at the bottom of the Hardware tab. The Add Hardware Wizard opens.
5. Select Hard Disk from the hardware types and click Next.
6. Select the recommended virtual disk type (for example SCSI) and click Next.
7. Select Create a new virtual disk and click Next.
8. Enter the required disk capacity (15 GB in this experiment) and choose whether the disk is stored as a single file or split into multiple files. Click Next.
9. Type a file name for the disk (a .vmdk file) and choose its location, then click Finish.
10. Check that the new hard disk is listed in the hardware list with the correct size, and click OK to save the settings.
11. Power on the virtual machine. If required, initialise, partition and format the new disk inside the guest operating system so that it can be used.

IMPLEMENTATION INPUT

VMware Workstation with the Add Hardware Wizard open and the option to create a new virtual disk selected.

OUTPUT

The screenshot is taken from VMware Workstation while adding a new hard disk to the virtual machine.

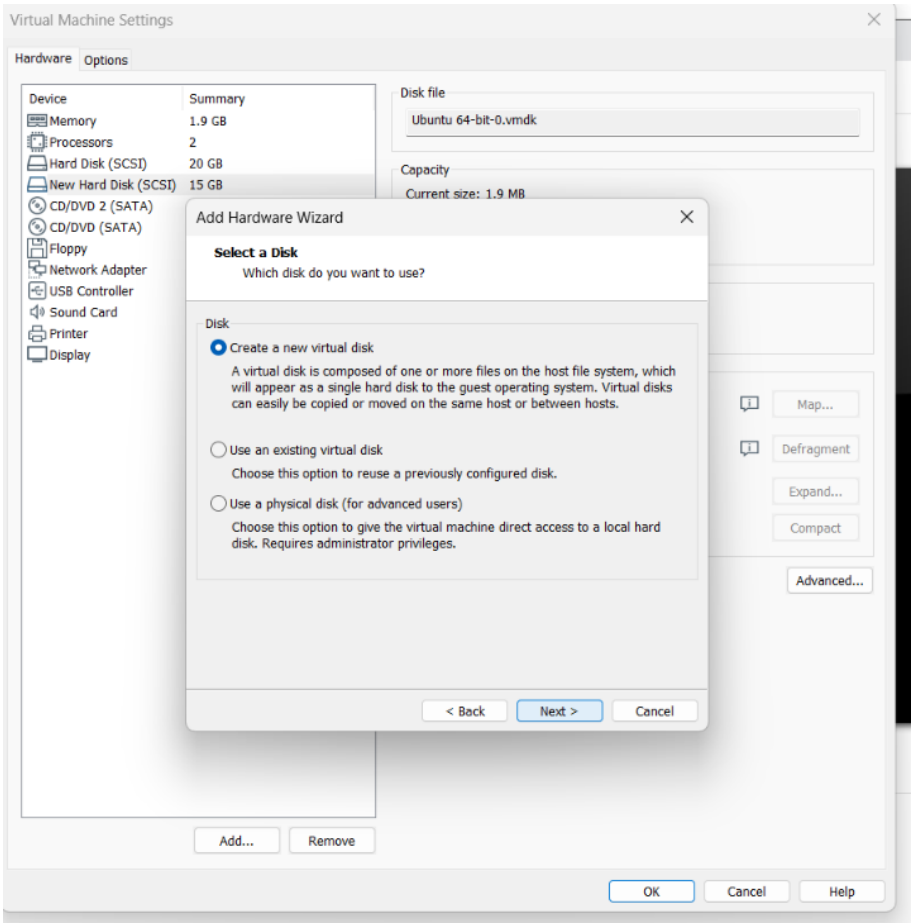

Figure 1: Add Hardware Wizard with "Create a new virtual disk" selected. The VM settings behind the wizard show a "New Hard Disk (SCSI)" entry with 15 GB listed.

RESULT

The virtual hard disk creation process was started in VMware Workstation. The screenshot shows the new hard disk entry listed as 15 GB and the wizard ready to continue. To show the process fully completed, continue through the wizard, click Finish and take a screenshot of the final hardware settings.
