CSA1507-Cloud computing and big data analytics
Experiment-6

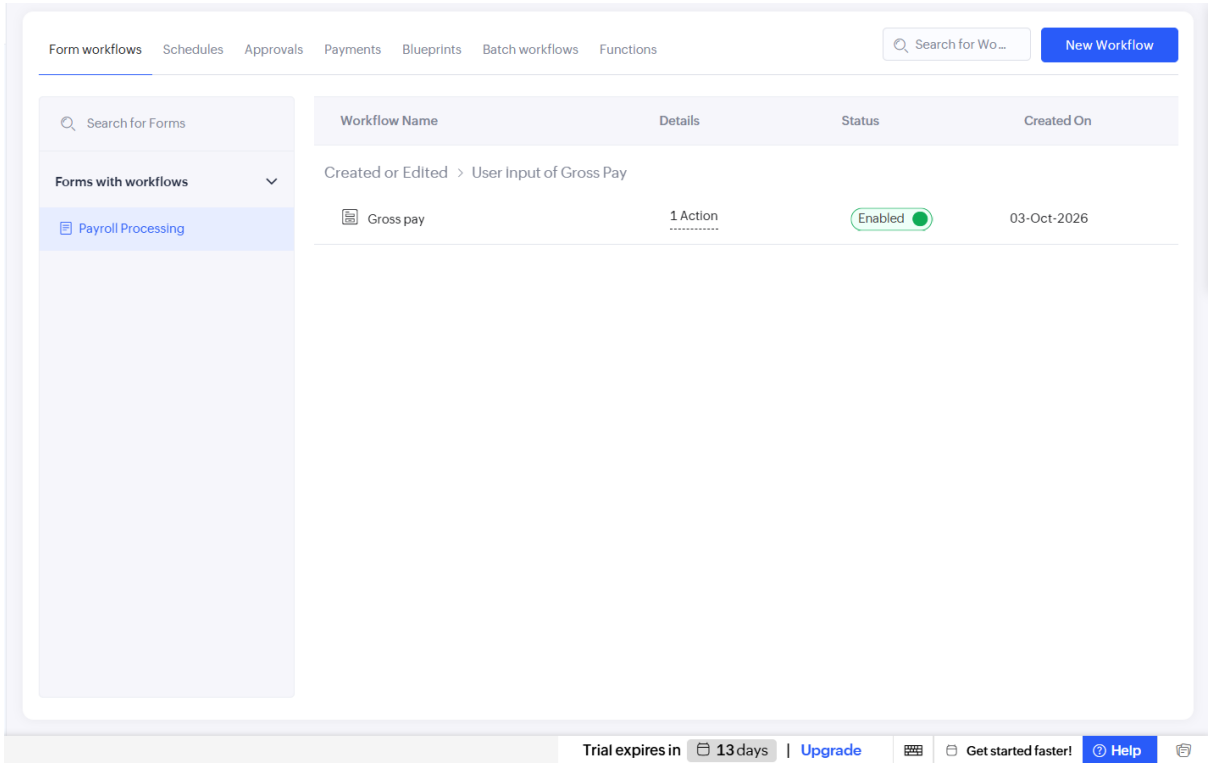

Aim: Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

Procedure:

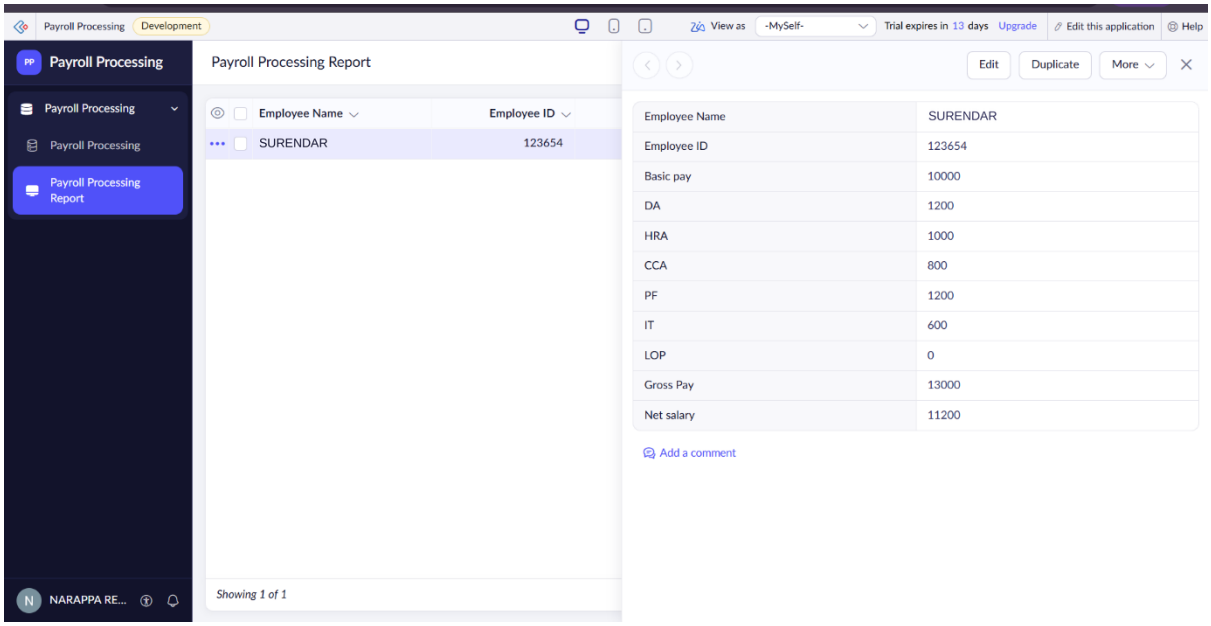

1. Sign in to a cloud service provider's low-code platform (Zoho Creator) and create a new application named "Payroll Processing".
2. Add a form named "Payroll Processing" to the application; this form acts as the SaaS front end for entering employee data.
3. Add the employee fields: Employee Name (First Name and Last Name) and Employee ID.
4. Add the earnings fields: Basic Pay, DA, HRA and CCA.
5. Add the deduction fields PF, IT (income tax) and LOP (loss of pay), along with the Gross Pay and Net Salary fields.
6. Create a form workflow named "Gross pay" that runs whenever a record is created or edited.
7. In the workflow action, calculate Gross Pay = Basic Pay + DA + HRA + CCA.
8. Calculate Net Salary = Gross Pay − (PF + IT + LOP) and store the result in the Net Salary field.
9. Create the "Payroll Processing Report" so that all employee payroll records are saved in the cloud database and listed online.
10. Run the application, enter a sample employee record, and verify that the report displays the calculated Gross Pay and Net Salary.

Input:

Payroll Processing
Payroll Processing
Payroll Processing
Payroll Processing
Payroll Processing Report
Employee Name
First Name
Last Name
Employee ID
Basic pay
DA
HRA
CCA
PF
IT
LOP

Output:

Result:

The Payroll Processing System was successfully developed as a simple cloud-based SaaS application. It stores employee details and automatically calculates HRA, DA, TA, Gross Pay, deductions, and Net Pay. The payroll records are securely stored in the cloud and can be accessed online by authorized users.
