CSA1507-Cloud computing and big data analytics
Experiment-9

Aim: Create a simple cloud software application for Hospital information system for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS with fields of patient name, age, address, phone, email, Attender name, attender phone, doctor name, diseases, etc.

Procedure:

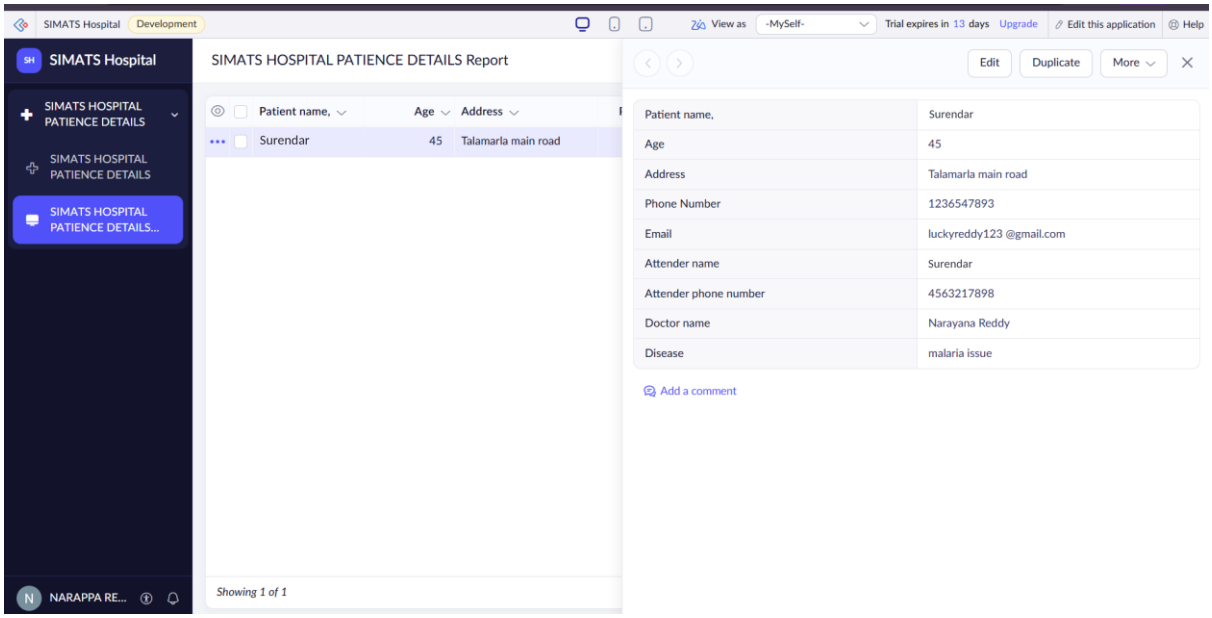

1. Log in to Zoho Creator, a cloud SaaS platform, and start a new application with the name "SIMATS Hospital".
2. Create a form called "SIMATS HOSPITAL PATIENCE DETAILS" in the application to collect hospital patient data online.
3. Insert the patient fields into the form: Patient name, Age, Address, Phone Number and Email.
4. Insert the attender fields into the form: Attender name and Attender phone number.
5. Insert the medical fields into the form: Doctor name and Disease.
6. Submit the form so that each patient record gets saved in the cloud database of the application.
7. Generate the "SIMATS HOSPITAL PATIENCE DETAILS Report" to show all saved patient records in a table.
8. Select a record in the report to see the complete patient, attender, doctor and disease details in a side panel.
9. Use the Edit button in the side panel to modify a patient record whenever the details change.
10. Run the application in development mode, enter a sample patient, and confirm that the record is displayed correctly in the report.

Input:

Output:

Patient name,	Age	Address	Phone Number	Email	Attender name	Attender phone number
Surendar	45	Talamarla main road	1236547893	luckyreddy123 @gmail.com	Surendar	4563217898

Result:

The Hospital Information System was successfully developed as a simple cloud-based SaaS application for SIMATS Hospital. The system stores and manages patient, attender, doctor, and disease details in a cloud database. Authorized hospital staff can access and manage the information through a web browser.
